

# **BATTERIES CAN CAUSE FIRES**

*They don't belong in the trash or recycling.*

Visit [nahmma.org/batteries](http://nahmma.org/batteries) to find out where to recycle batteries properly.

Batteries and small electronics like cell phones, tablets, and vape devices ignite hundreds of fires at waste and recycling facilities each year. They should never be placed in your trash or curbside recycling. Take them to a battery collection facility in your community.
